

# CHIEF ENGINEER SHEN

## ROLE:

CHIEF ENGINEER

## AREAS OF EXPERTISE:

Mechanical Engineering,  
Robotics, Alien tech

The only second-generation member of XCOM, Lily Shen followed in the footsteps of her father, renowned engineer Dr. Raymond Shen. Serving as Chief Engineer aboard the Avenger, Shen is naturally gifted when it comes to dealing with the diverse collection of human and alien technology XCOM now relies on for survival. She notably pioneered the development of remote "Gremlin" drones to support XCOM's field operations. Rumor has it her personal Gremlin, ROV-R, is uniquely modified.

## PSYCH PROFILE NOTES:

Although one would expect this patient to be deeply troubled by the events of her childhood, having lived through the invasion at age eight, Lily is surprisingly well-adjusted. Under the guidance of her father, she apparently spent much of this time after the war on the move, leaving her distrustful and prone to impatience. With the initial recovery of the Avenger, Shen was educated by her father until his passing, an event she took particularly hard. Her close attachment to the Avenger, as well as her aggression towards the aliens, can be attributed directly to this loss.
